# **Using the Impairment Guide**

The following pages will provide you with a general guide to the probable underwriting action pertaining to many of the most commonly encountered medical impairments. By referring to this guide, you may be able to prepare your client for a special class rating or other coverage limitations based on their medical history.

Some conditions may require a table rating and a flat extra premium. To simplify this guide, table ratings have been used, but a flat extra premium may be used additionally in the event of a higher risk that is temporary – for example, after cancer treatment, heart attack or stroke.

Each case will be evaluated on its own merits. Some applicants may be found to have several minor impairments, none of which alone requires a special class rating. However, collectively, the applicant's health and, therefore, mortality is affected. Additional benefits such as waiver of premium, accidental death benefit coverage, and critical illness coverage may not be included based on impairment and rating.

Final decision on all applications will be determined by Assurity. Many common impairments are listed. For impairments not listed, please contact the underwriting department at (800) 869-0355 Ext. 4264.

# **Abbreviations and Ratings**

The following abbreviations and ratings are used throughout this guide.

| Abbreviations | Description                  |
|---------------|------------------------------|
| Decline       | Not an insurable risk        |
| IC            | Individual consideration     |
| PP            | Postpone                     |
| RFC           | Rate for cause               |
| Trial         | C.O.D. only this risk        |
| Us            | Usually                      |
| Us 0          | Usually standard (no rating) |
| 0             | Not rated                    |

| Rating | Description   |  |
|--------|---|--|
| T1     | Table 1 (125 percent) – 25 percent increase in mortality  |  |
| T2     | Table 2 (150 percent) – 50 percent increase in mortality  |  |
| T3     | Table 3 (175 percent) – 75 percent increase in mortality  |  |
| T4     | Table 4 (200 percent) – 100 percent increase in mortality |  |
| T5     | Table 5 (225 percent) – 125 percent increase in mortality |  |
| T6     | Table 6 (250 percent) – 150 percent increase in mortality |  |
| T7     | Table 7 (275 percent) – 175 percent increase in mortality |  |
| T8     | Table 8 (300 percent) – 200 percent increase in mortality |  |

Е

**Electrocardiogram** – Provides findings suggesting the presence of myocardial ischemia or other metabolic myocardial problems. Electrocardiographic evidence of acute or prior myocardial infarction may be present when these events have occurred. It demonstrates the presence of abnormal cardiac rhythms (arrhythmias) and, very frequently, their mechanisms. It reveals abnormalities of the cardiac conduction system. Each abnormality must be evaluated with full records by our Medical Director and/or our Reinsurers.

**Embolism, Pulmonary** – An embolism, usually a blood clot, most frequently arising in the lower extremities or pelvis, which travels to the lung via the venous circulation, resulting in varying degrees of pulmonary vascular obstruction.

Single attack

|     |   |         |

**Hypertension** – Increased blood pressure on the arterial walls. May be a symptom of a disease or a disease process in itself. Most individuals can achieve control through diet, weight reduction, drug therapy or a combination. Uncontrolled or inadequately controlled hypertension will result in ratings from Table 1 to Decline. Documented, well-controlled and uncomplicated cases will frequently be issue standard. It is a cardiovascular risk factor and must be evaluated carefully. When found to exist with other cardiovascular problems or risk factors, it may require a special class rating even though the readings on the exam were normal.

Hyperthyroidism, Hypothyroidism – See "Thyroid Disorders"

# Why Assurity?

At Assurity, we're working hard to make the business of insurance simple – more human – by listening, showing that we care and offering customers invaluable insurance products and financial protection. More than a business with a bottom line, we're a mutual organization whose mission is helping people through difficult times. By dedicating ourselves to the community, the environment and using our business as a force for good, we're able to take the long view when it comes to upholding our promises. Assurity is also the first major life and specialty health insurer to become a Certified B Corporation®, demonstrating we meet the rigorous standards of social and environmental responsibility.
